

# Case Study

## Rocol Foodsafe Chain Lube

### INDUSTRY

Meat Processing Abattoir

### PROBLEM

The largest Australian processor and global leader in animal protein processing was experiencing problems with their chain lube. Applied to the dressing roller the original lubricant was a 2 part product which took a long time to apply. Resulting in extended maintenance hours and it was inconsistent in providing penetration of lubricant to the rollers where it is needed. The inconsistent lubrication contributed to a less than optimal roller operation life.

### APPLICATION

Dressing Rollers. The cattle carcase is suspended from the dressing roller for transportation through out the facility.

### SOLUTION

After trialling Rocol Foodsafe chain lube the site reported that the Rocol product was quicker to apply and it also penetrated the rollers consistently resulting in improved lubrication.

### BENEFIT

The Rocol Foodsafe product is less expensive per operating hour than other products. The ease of Lubrication combined with the extended roller life due to better lubrication has delivered substantial cost savings for the customer through

- Reduced maintenance hours.
- Reduced roller replacement frequency.
- Reduced lubricant consumption.
