

Case Study

Cylindrical Roller Bearing

PHOENIX

INDUSTRY

Coal Mine

PROBLEM

Many companies across the country are being caught up in the "Global Steel Shortage" resulting in an increase in delivery times for many larger and non standard Bearings. Factory manufacturing times are increasing and proving frustration to our customers. A large Coal mine recently were frustrated when trying to source some special 320mm diameter cylindrical roller bearings, and were quoted a 6 – 8 months delivery and came to BSC for help.

APPLICATION

SOLUTION

BSC's UK supplier Phoenix Bearings UK are recognised as a "one off" and special production bearing manufacturer. Meeting the needs of major OEM manufacturers and specialist bearing houses they make a full range of ball, and cylindrical roller bearings onsite in their UK production facility. All bearings feature brass cages and are manufactured to the highest standards.

BENEFIT

Phoenix keep a range of hard to get inch size bearings in stock and quoted 10 weeks into Australia, and were 10% cheaper than the others.
