

# Case Study

## INDUSTRY

Boat Manufacturer & Repairer

## PROBLEM

The problem is twofold. Multiple products are required to complete the job; sanding & grinding discs, sanding pads and flap wheels. Time is further consumed with staff searching for the correct tool to change grinder wheels.

## APPLICATION

Preparing metal for painting

## SOLUTION

BSC recommended the use of the PFERD 5" Combiclick system. The Combiclick is based on a sanding disc the customer can then use it as a grinder and then you can give the product a light sand and it's ready to paint all from using the same disc. No time is wasted changing disc. The necessity to carry additional stock of standard grinding discs, sanding pads and flap wheels has also been removed.

## BENEFIT

The Combiclick saves time on the job with the quick change of discs completed in seconds. The benefit for the customer in time as staff don't have to walk around the workshop searching for spanner to change discs. Stores inventory reduction is another advantage with Combiclick replacing 4 different products. Brett Ryan (Workshop Manager) states "The Combiclicks have been a great success and they last a lot longer than you think they would".
