Welcome To Teco!

TECO Australia – Electric Motor Division

Established in 1983 as a wholly owned subsidiary of TECO Electric & Machinery Co., TECO Australia has earned a reputation as a reliable supplier of superior quality Electric Motors, Variable Speed Drive systems and Motor Controls. These products are all designed, manufactured and tested to meet stringent Australian and International Standards.

TECO Electric Motors are regarded as one of the leading brands available on the market and are regularly specified and preferred amongst equipment manufacturers, constructors, engineering companies and major end-users alike.

TECO Electric & Machinery Co.

From modest beginnings in 1956, TECO Electric & Machinery Co. has grown to be one of the worlds largest manufacturers of an extensive range of electric motors. In addition to the core manufacturing facilities in Taiwan, the continual growth of TECO on a global front has seen the formation in 1995 of the TECO Westinghouse Motor Company in the USA, borne out of the 100% ownership of the Westinghouse Motor Company

along with the establishment of additional major manufacturing facilities around the world to service new markets and meet global demand.

TECO Westinghouse

Today TECO designs and manufactures a complete range of low, medium and high voltage motors, Variable Speed Drives and Control Gear with sales and support being offered on a global basis.

Quality Assurance

All TECO manufacturing plants and TECO Australia have been assessed to meet the requirements of ISO9001:2008 documented quality systems.

Environmental and RoHS

TECO major manufacturing plants in Taiwan have ISO14001 Environmental Management System accreditation.

Low Voltage motors manufactured by TECO do not contain (or contain within the maximum allowable limits) any restricted hazardous substances as per European Directive 2002/95/EC(RoHS).

[Driving & Connecting Globally](#)

General Information

The motors described in this catalogue are designed and manufactured by TECO Electric & Machinery Co. and are Squirrel Cage Induction Motors intended for general purpose industrial / arduous mining applications and meet all relevant sections of the Australian, New Zealand and International Standards detailed herein.

Electrical Design and Standards

Altitude

Designed for operation at an altitude up to 1000 metres above sea level, refer to [page 23](#) for higher altitudes.

Ambient

Motors are designed to operate in ambient conditions of -20°C to +40°C with motors being capable for operation within an ambient of 50°C. Please refer to [page 23](#) for operation in adverse ambient conditions.

Direction of Rotation

Standard rotation is clockwise when viewed from the drive end with the terminal marking corresponding to incoming line markings.

Duty Rating

All motors have a maximum continuous duty rating of S1 to AS60034-1. Other duty ratings are [available on request](#).

Electric Supply

Stock motors are designed for operation on a 380~415 Volt 3-Phase 50 Hz supply and are also suitable for a 440~480 Volt 3-Phase 60 Hz supply.

Motors 4 kW and below are 380~415 Volt 50 Hz STAR connected and may also be reconnected to 240 Volt 3-Phase 50 Hz DELTA configuration for use with single phase input inverters.

Motors 5.5 kW and larger are 380~415 Volt 50 Hz DELTA connected.

Please refer to [page 24](#) for Connection diagram.

Motors can be manufactured for supply systems of up to 1100 Volts, 50 or 60 Hz on a factory made to order basis or by local rewind / wind.

Motor Types / MEPS (Minimum Efficiency Performance Standard)

All motors meet or exceed the requirements of Australian New Zealand Standard "AS/NZS1359.5-2004 3-Phase cage induction motors high efficiency and minimum efficiency performance standards requirements" within the range of 0.75 kW to less than 185 kW, 2 – 4 – 6 & 8 pole single speed, rated S1 continuous duty, compliance as detailed herein.

Standards and TECO compliance is detailed below

TECO Type Designation	Frame Size	Output kW	Name plated	Efficiency Level
AEEB-NE	D63 ~ D90L	< 0.75	TECO	Not applicable
AEHB ~ AEHD	D80 ~ D315M	0.75 ~ 185	TECO MAX-E2™	MEPS table B2 or B3 as nominated

* MEPS covers motors less than 185kW.

* Larger sizes also available, [refer to TECO for details.](#)

Performance

Motors are designed to meet the performance requirements of Design N as per AS1359.41, normal torque for Direct On Line starting.

Motors are also suitable for other means of starting, depending on load characteristics, please refer to TECO.

Other performance characteristics can be manufactured to suit any special requirement.

Standards

Motors are designed, manufactured and tested in accordance with AS1359. Frame sizes comply with AS1359.30 Australian / British allocations.

Motors also meet the requirements of European Directives where applicable and are CE marked.

For EMC "C-tick" requirements to AS1044, squirrel cage induction motors fall into Compliance Level 1 "Voluntary" category.

TECO has a "Declaration of Conformity" and is a registered user of "C-tick" number N121, which covers TECO squirrel cage induction motors.

For other foreign standards i.e. UL, CSA etc., please refer to TECO.

Stator and Windings

The stator is made up of exceptional high grade, low loss insulated cold rolled electro magnetic silicon steel laminations for maximum efficiency and low core losses.

Windings are random wound with double

enamelled Class H copper wire, impregnated with a solventless resin and are tropic proof rated as standard. Other insulation materials used meet Class F as a minimum.

Windings are designed with a temperature rise of less than Class B (80°C), however, in most cases are less than Class E (75°C) for long motor life, providing superior thermal reserve in abnormal conditions.

Testing

In addition to a full program of tests during manufacture each motor is subjected to routine tests to AS60034-1 prior to despatch. Performance testing (witnessed or unwitnessed) can be arranged for factory made to order motors.

Variable Speed Drive (VSD) Suitability

Motors are suitable for VSD operation, subject to torque and speed limitations depending on the load characteristics and correct installation of motor and drive.

For Variable torque loads (centrifugal pumps and fans) for speeds between 5~50 Hz derating is not normally required, outside of this range please check with TECO for motor suitability. Force cooling units are also available when necessary (please refer to [page 20](#) for force cooling details and [page 31](#) for VSD rating).

Electro-discharge machining of motor bearings can be a concern in some applications with larger motors on VSD's (please refer [page 32](#) for our preventative measures).

Winding Protection

Motors D160 and larger are fitted with PTC thermistor protection (P140) within the windings (one per phase) with the leads terminated in the main terminal box.

Mechanical Design and Standards

Balance

All rotors are dynamically balanced with a half key to Class N or better, in accordance with AS1359.114.

Bearing and Lubrication System

Frame Size	Poles	DE Bearing	NDE bearing	Greasing/ Shaft Seal
D63 ~ D90L	2	Ball	Ball	Greased for life/ Gamma***
D100L ~ D160L	2	Ball	Ball	Greased for life (GR)/ Gamma***
D180M ~ D250M	2	Ball	Ball	Grease relief
D280S ~ D355*	2	Ball	Ball	Grease relief brass dust flinger
D63 ~ D90L	4 and Above	Ball	Ball	Greased for life/ Gamma***
D100L ~ D132M	4 and Above	Ball	Ball	Greased for life (GR)/ Gamma***
D160M ~ D180M/L	4 and Above	Ball (Roller)	Ball	Greased for life (GR) / Gamma***
D200L ~ D225M	4 and Above	Ball (Roller)	Ball	Grease relief/ Gamma
D250S ~ D250M	4 and Above	Roller (Ball)	Ball	Greased relief/ Gamma
D280S ~ D315M	4 and Above	Roller (Ball)	Ball	Grease relief/ brass dust flinger

Key: (options in the parentheses are alternatives)

GR – Grease Relief

* Larger sizes also available, [refer to TECO for details.](#)

** Ball bearing fitted for direct drive applications, Roller can be fitted for Belt Drive applications, [please refer to TECO.](#)

*** Oil Seal fitted to flange/Cface.

- 2 Pole motors up to D180 are suitable for direct drive or belt drive.
- 2 Pole motors D200 and larger are suitable for direct drive, belt drive above D200 please refer to TECO.
- 4 Pole and larger; up to and including D315MC, motor are suitable for Belt or Direct Drive.

TECO Through Flush Grease Relief Bearing System with Gamma Seal to D250

TECO Through Flush Grease Relief Bearing System with Brass Dust Flinger D280-315

The fitment of rotating inner & outer labyrinth seals achieves effective sealing from ingress of contamination.

This is a true pressure grease relief system where the grease enters the back of the bearing then is forced through to the front and is expelled through a large external discharge chute.

This system will not allow over greasing to affect the performance of the bearings. This type of grease replenishment system will not allow contaminants to be pushed back into the bearing itself, which can cause premature bearing failure.

Bearing Lubrication Instructions

	22		220
	24		270
			300

- Notes:**
1. Please ensure bearings are fully purged during commissioning, thereafter adhere to the above greasing schedule.
 2. Replenishment of grease recommended when motor is running.
 3. Do not mix dissimilar greases.
 4. TECO recommends use of SHELL ALVANIA RL3 Lithium based grease on motors frame size up to and including D315M.

When do motors require greasing?

- At initial start during commissioning.
- If the motor has been out of service for three (3) months or longer.
- At predetermined intervals, please refer to "Table 1".

What to do prior to greasing?

Check the motor nameplate for the type of grease and check that the grease you plan to use is fully compatible.

Clean the grease nipples on the motor and the grease gun discharge connection.

Ensure that the grease discharge chute on the motor is clean and not blocked with old hard grease.

How to effectively grease an electric motor?

The electric motor must be running with preferably the bearings up to normal operating temperature.

Pump-in ½ of the required quantity of grease as in "Table 2" to each bearing and allow to settle.

After 5-10 minutes pump-in the other ½ of the required grease quantity.

Please note it is normal to see an increase in the bearing temperature during the greasing procedure.

Expelled grease should be evident at the rotating labyrinth seal and within the discharge chute.

30 minutes after the greasing procedure the bearing temperatures should return to normal, if not, please check that there are no other reasons for an increase in bearing temperature, i.e. misalignment, high vibration etc.

Bearing False Brinelling Protection

A bearing, will experience false brinelling when it is not turning and subjected to vibrations of some sort. This is generally in cylindrical roller type bought about from transportation without an effective shaft lock to prevent movement or from vibration of the motor when de-energized. Because the bearing is not turning, the grease or oil will be gradually removed from the ball or roller contacts ending in metal to metal contact. Wear is then allowed to take place and the damage will cause the bearing to fail prematurely after start up. TECO do fit a shaft locks on D180 2 pole ~ D200 4 pole and larger to prevent false brinelling.

**Extensive shaft
locking clamp on
D280-315M
TECO motor**

Cooling System

Cooling is Totally Enclosed Fan Cooled (TEFC), with integrally cast cooling fins on frame and endshields, fitted with external fan (IC411) to AS60034-7.

The cooling fans are bi-directional and low noise as standard.

Finish

All external components are shot blast to a near white finish. A durable coat of Alkyd Resin primer giving excellent corrosion protection follows this preparation. The complete motor is then finish coated with Alkyd Resin Gloss Enamel in TECO Grey (Munsell 7.5BG 4/2).

Other paint systems and colours are available upon request, including chemical duty two pack epoxy paint systems.

Hardware

All hardware is electro zinc plated for better corrosion resistance.

Stainless steel hardware can be offered as an alternative, please [contact TECO](#) for the surcharge to provide this feature.

MAX-E3-H66

Please refer to separate catalogue for details on TECO High Efficiency MAX-E3-H66 motors.

Mounting

Motors are available in the following mountings, refer to [page 21](#) for IM codes of mountings.

- Foot mounted
- Foot and Flange mounted
- Flange mounted
- Foot and C Face mounted
- C Face mounted

Motor Construction

Motor frames are high grade Cast Iron with integrally cast feet and cast iron end shields, suiting mining applications.

Castings are machined to close tolerances in order to ensure accurate alignment with minimum vibration.

Standard Materials of Construction

Frame Size	External Fan	Fan Cover	Terminal Box
D63~D160	CPP (CI)	HDPS (CI)	CI
D180 (2 pole)	CPP (CI)	HDPS (CI)	CI
D180 (4 pole)	CI	HDPS (CI)	CI
D200~D315M	CI	HDPS (CI)	CI
D80~D132	CPP (CI)	HDPS (CI)	CI
D160~D315M	CI	HDPS (CI)	CI

Key: (material in parentheses is alternative)

CPP – Conductive Polypropylene (Non Sparking)

CI – Cast Iron

HDPS – Heavy Duty Pressed Steel

* Larger sizes are also available, please [refer to TECO for details](#).

Protection (IP rating – stock motors)

All motors are rated IP66, thereby providing excellent protection against the ingress of dust and water.

Rating Plate

A stainless steel rating plate containing all details as specified in AS60034-1 including bearing sizes are fitted to all motors. Rating plate also confirms compliance with MEPS Efficiency Standard.

As fitted to motors 0.75kw and larger.

Rotor Assembly

As per the stator, the rotor core is made up of exceptional high grade, low loss insulated cold rolled electro magnetic steel laminations for maximum efficiency and low core losses.

The rotor cage is pressure die cast high conductivity aluminium with waffer blades and balance supports integrally cast onto the rotor endrings.

On some larger frame size motors, the rotor is of copper/copper alloy rotor bar construction. This rotor construction offers superior performance and reliability. TECO utilizes high frequency induction brazing as a means to enhance the structural integrity of the rotor bar to endring joint. Induction brazing provides an "all at once" uniform braze that reduces stresses and hot spots in the joint, which can cause premature fatigue and rotor bar failure.

The rotor is a press fit onto the high tensile steel shaft (ANSI1040) and is also keyed onto the shaft on motor frames D200 and larger.

Induction Brazing

Finished Rotor and Shaft Assemblies

Terminal Box

On motors up to and including D315M, the terminal box is mounted on the right hand side viewed from drive end and can be transferred to the left hand side upon request.

All terminal boxes have one-piece neoprene gaskets between frame, box and gland plate and can be rotated through 360° in 90° increments. An internal earth is provided within the motor terminal box.

Maximum Cable Sizes

Frame Size	Maximum Cable Size
D63 ~ D71	2.5 mm ²
D80 ~ D112	10 mm ²
D132 ~ D180	50 mm ²
D200 ~ D225	95 mm ²
D250 ~ D315M*	185 mm ²

Notes: Sizes based on -
3 core + Earth Copper PVC Insulated / PVC Sheathed or
3 core + Earth Copper PVC Insulated / Steel Wire Armoured.
Standard Cast Iron terminal box *
Larger terminal boxes available, [please refer to TECO](#).

Options

Some available options in this range are as follows:

- Airstream rated IC418
- Anti-condensation heaters
- Auxiliary terminal boxes for Thermistor / Heater / RTD terminations
- Electromechanical "fail safe" Brake Motors
- Cooling Tower application
- Crane rated motors
- Double / non standard shaft extensions
- Encoder / Tacho
- Force ventilation IC416
- Induction Generators
- Insulated bearing
- IP66 enclosure
- Multi-speed motors
- Resistance temperature detectors (RTDs) winding and / or bearings
- Rotor Groundary brush
- Smoke spill to BS7436 to 185 kW
- Special paint systems / colours
- Stainless steel fasteners
- Thermistor protection (on motor frames <D160)
- Others on request

Mechanical Design

Axial / Radial Loadings

The table below gives the permissible axial and radial loads. The values are based on normal conditions at 50 Hz and a calculated L10 bearing life of 40,000 hours.

Frame Size	Radial Load Horizontal Shaft	Axial Load Horizontal Shaft	Axial Load Shaft Down (down thrust)	Axial Load Shaft Down (up thrust)
80	47 kg	69 kg	65 kg	73 kg
90	49 kg	73 kg	66.5 kg	79.5 kg
100	72 kg	105 kg	95 kg	115 kg
112	95 kg	138 kg	124 kg	152 kg
132	147 kg	143 kg	123 kg	163 kg
160	179 kg	174 kg	134 kg	214 kg
180	248 kg	238 kg	182 kg	292 kg
200	297 kg	290 kg	210 kg	370 kg
225	305 kg	310 kg	230 kg	390 kg
250	1400 kg	325 kg	320 kg	510 kg
280	1500 kg	-	-	-
315M	1650 kg	-	-	-

- Notes:**
1. Based on 4 Pole motors, bearing life L-10 40,000 hours.
 2. For radial load overhung point at centre of shaft extension.
 3. For other loadings, [please contact TECO](#).

Axial Radial Loadings - Foot

Axial Radial Loadings - Flange

Cooling

Designation System Concerning Methods of Cooling Refers to Standard AS1359.106.

Standard Code Example

Code	Description	Type
IC 01	Self-cooling open machine.	
IC411	Enclosed machine. Smooth or finned ventilated casing. External shaft-mounted fan.	
IC416	Enclosed machine. Smooth or finned ventilated casing. External motorized axial fan supplied with machine.	

Example

Code		IC	4	(A)	1	(A)	6
International Cooling							
Circuit Arrangement	0 : Free circulation (open circuit) 4 : Frame surface cooled						
Primary Coolant	A : Air (omitted for simplified designation)						
Method of Movement of Primary Coolant	0 : Free convection 1 : Self-circulation 6 : Machine-mounted independent component						
Secondary Coolant	A : Air (omitted for simplified designation) W : Water						
Method of Movement of Secondary Coolant	0 : Free convection 1 : Self-circulation 6 : Machine-mounted independent component						

Cooling air flows from the non-drive-end to the drive end. When the motor is installed care should be taken not to impede the airflow into the motor fan cover. As a guide the following minimum dimension BL should be adopted.

Motor Frame	Dimensions BL (mm)
80 - 100	60
112 - 132	85
160 - 180	85
200 - 250	110
280	140
315 - 355	180

Force Cooling IC416

TECO can offer force cooling on most TEFC motors, listed below are common sizes with details (larger sizes please refer to TECO). All force cooling motors are 230 ~ 240 Volts Single Phase 50 Hz and are IP55 as standard. Fan motor leads are terminated in an auxiliary terminal box mounted on the fan cover.

Frame Size	Motor Watts	Amps	Force Cooling Unit length "Lfc" in mm
D80	17	0.1	95
D90	29	0.12	95
D100	29	0.12	90
D112	46	0.22	105
D132	46	0.22	85
D160	75	0.42	140
D180	75	0.42	135
D200	135	0.59	95

Notes: 1. Dimensions subject to change.

Protection (IP code)

Protection (IP)

First number: Protection against solid objects			Second number: Protection against liquids		
IP	Tests	Definition	IP	Tests	Definition
0		No protection.	0		No protection.
1		Protected against solid objects of over 50mm (e.g. accidental hand contact).	1		Protected against vertically dripping water (condensation).
2		Protected against solid objects of over 12mm (e.g. finger).	2		Protected against water dripping up to 15° from the vertical.
3		Protected against solid objects of over 2.5mm (e.g. tools, wire).	3		Protected against rain falling at up to 60° from the vertical.
4		Protected against solid objects of over 1mm (e.g. thin wire).	4		Protected against water splashes from all directions.
5		Protected against dust (e.g. no deposits of harmful material).	5		Protected against jets of water from all directions.
6		Totally protected against dust.	6		Protected against jets of water comparable to heavy seas.
			7		Protected against effects of immersion to depths of between 0.15 and 1m.
			8		Protected against the effects of prolonged immersion at depth.

Electrical Design

Altitude and Ambient Temperature

Rated output power specified in the performance data tables apply for standard ambient conditions of 40°C up to 1000 m above sea level. Where temperature or altitude differ from the standard, multiplication factors in the table below should be used if motor temperature rise is to be maintained.

Ambient Temperature	Temperature Factor	Altitude above sea level	Altitude Factor
30°C	1.06	1000 m	1
35°C	1.03	1500 m	0.97
40°C	1	2000 m	0.945
45°C	0.97	2500 m	0.92
50°C	0.93	3000 m	0.89
55°C	0.9	3500 m	0.865
60°C	0.865	4000 m	0.835

- Notes:
1. Effective Power = [Rated Power] x [Temperature Factor] x [Altitude Factor]
 2. The low temperature rise of TECO motors in many instances preclude the need for derating, please [refer to TECO](#).

Earth Topography

Anti-Condensation Heaters (Optional)

Anti-condensation heaters are used to prevent the water accumulation caused by moisture condensation inside the motor. These are flexible type elements and tied on the ends of the winding to maintain the average temperature of the motor above dew point. The heaters must be switched on when the machine stops and switched off whilst the machine is in operation. A prominent warning label is fitted with the appropriate rating of the heaters nominated.

The space heater leads are normally terminated to an auxiliary terminal box for safety reasons.

The normal supply of space heaters is single phase 240V, other voltages can be supplied on request.

Power Rating of Anti-Condensation Heaters

Heater length varies to suit diameter of end-winding.

Frame Size	Power in Watts
80 ~ 100	25
112	21
132 ~ 160	40
180 ~ 200	26
225 ~ 250	42
280	54
315M	99
315A	200
355	250

Connection Diagrams

TECO motors are connected as shown on the motor nameplate, typical Star or Delta connection diagram is shown below.

TECO stock motors 4 kW and below are 380 ~ 415 Volt 50 Hz STAR connected and may

also be reconnected to 240 Volt 3-Phase 50 Hz DELTA configuration for use with single phase input inverters.

Motors 5.5 kW and larger are 380 ~ 415 Volt 50 Hz DELTA connected.

STAR CONNECTION

DELTA CONNECTION

Duty

TECO motors are supplied suitable for S1 operation (continuous operation under rated load). When the motor is to operate under any other type of duty the following information should be supplied to determine the correct motor size.

- Type and frequency of switching (short time, intermittent, periodic, high inertia, braking).

- Load torque variation during motor acceleration and braking (in graphical form).
- Moment of inertia of the load on the motor shaft.
- Type of braking (e.g. mechanical, electrical through phase reversal or DC injection.)
- For duty cycles other than S1 please [refer to TECO](#).

Formulae and Conversions

Electric Motor characteristics

Output Power

$$P \text{ (kW)} = \frac{M \times n}{9550}$$

Output Power

$$P_{\text{mec}} = \frac{\sqrt{3} \times U \times I \times \cos \phi \times \eta}{1000}$$

Output Torque

$$M = \frac{9550 \times P}{n}$$

Star Delta Starting

$$\text{Torque (Star)} = \frac{\text{Full Load Torque (Delta)}}{0.333}$$

$$\text{Current (Star)} = \frac{\text{Full Load Current (Delta)}}{0.577}$$

3-Phase Input Power

$$P_{\text{el}} = \frac{\sqrt{3} \times U \times I \times \cos \phi}{1000}$$

Efficiency

$$\eta = \frac{\text{Output kW}}{\text{Input kW}}$$

$$\eta = \frac{P_{\text{mec}} \times 1000}{\sqrt{3} \times U \times I \times \cos \phi}$$

Motor Current

$$I = \frac{P_{\text{mec}} \times 1000}{\sqrt{3} \times U \times \cos \phi \times \eta}$$

$$I = \frac{P_{\text{elec}} \times 1000}{\sqrt{3} \times U \times \cos \phi}$$

I - Motor current, can be calculated for full or partial loadings.

Use Efficiency and Power Factor relative to motor loadings.

Motor Speed

$$n = 120 \times \frac{f}{\text{Poles}}$$

Hz	Number of Poles - Synchronous Speed					
	2	4	6	8	10	12
50	3000	1500	1000	750	600	500
60	3600	1800	1200	900	720	600

Key: P = Power in kW
Subscript
 P_{el} = electrical
 P_{mec} = mechanical

m = Torque in Nm
 n = Rotational speed in r/min
 U = Line voltage in V
 I = Line current in A
 cos φ = Power factor (per unit)
 η = Motor efficiency (per unit)
 f = Frequency in Hz
 J = WR² = WK²

Insulation Classes

The graph below indicates the limits of winding temperature and temperature rise for the various insulation classes in accordance with AS60034-1 Items 1b) & 1d) AC motors.

The difference between the temperature rise and the insulation class rating equates to the safety margin available.

The majority of TECO motors comply with a limitation of Class E temperature rise (75°C) or less thereby providing a minimum of an additional 5°C that can be added to the safety margin, which provides the client with a motor that will perform extremely well in arduous temperature applications whether this be load or ambient induced.

Speed vs. Torque - Current

The graph below indicates the typical speed vs. torque current characteristics of a D132 frame motor to "Design N" Normal Torque. The motor is started DOL and the major points on these curves are defined below.

Speed vs. Torque - Current Curves

Starts Per Hour

Starts Per Hour and Maximum Load Inertia

Maximum starts per hour DOL based on maximum load inertia listed, these are quoted as equally spaced and includes one cold start.

For larger inertias and / or greater frequency of starting please [refer to TECO](#).

Starts Per Hour (Based on Maximum Load Inertia)

Notes: * For larger sizes please [refer to TECO](#).

Thermal Protection

The various types of thermal protection devices are described as below. Whilst these devices provide excellent thermal protection they may not fully protect against some transient conditions.

Additional set(s) of these protection devices can be provided with a lower temperature rating which can be utilized as an alarm function. Higher temperature ratings can be supplied for higher trip temperatures, however care should be taken to ensure the temperature rating of the insulation class is not compromised.

Thermistors

Thermistors, thermo-variable resistors and have a positive temperature co-efficient (PTC). Three thermistors are fitted to the end-windings (one per phase), which are connected in series. The standard TECO thermistors have a trip temperature of 160°C @ 1000 ohms (3000 ohms total, 3 thermistors, one per phase).

Thermistors are sensors that require connection to a control relay (this relay is not supplied by TECO).

The leads normally are terminated in the main terminal box with an auxiliary terminal box available if specified.

Temperature vs. Resistance Diagram

Connection Lead Colour Coding

Trip Temperature (°C)	Lead Wire Colours	
90	GREEN	GREEN
100	RED	RED
110	BROWN	BROWN
120	GREY	GREY
130	BLUE	BLUE
140	WHITE	BLUE
150	BLACK	BLACK
160	BLUE	RED

Thermistors and / or RTD's should not be Meggered or tested at a voltage above 2.5 volts.

Typical Thermistor Nameplates

Resistance Temperature Detectors (RTDs)

An RTD, Resistance Temperature Detector, is a device that provides a change in resistance value in relationship to temperature.

This change is of a linear nature thereby providing the ability to accurately monitor the motor operating temperatures when connected to an appropriate relay.

The most commonly used RTD is the platinum type which has a nominal resistance of 100ohms @ 0°C (PT100) and is of the 3 wire type (other RTD types available on application).

When fitted the RTD leads are terminated to an auxiliary terminal box (it is recommended that external wiring to this box be of the screened copper conductor type to prevent any electromagnetic interference).

- Winding RTDs can be provided within the windings, one per phase or more as required.
- Bearing RTDs can be provided if required. The RTD element is located in a stainless steel metal probe and is mounted within a bearing thermowell.

"3 wire" RTD circuit

Table for Platinum Resistance Elements (Resistance in Ohms vs. Temperature) e.g. 19°C = 107.40 Ohms

°C	0	1	2	3	4	5	6	7	8	9

Variable Speed Drives (VVVF)

The output of Variable Voltage Variable Frequency (VVVF) Drives is not purely sinusoidal. This causes higher voltage stresses within the windings and increases the losses, vibration, and noise of the motor. The Loadability Curve and Maximum Safe Speed are as below, this graph should be used as a guide only. Further consultation with TECO may be required for arduous critical speed and load duties.

Typical Motor Loadability Curve

- Notes:**
- 1. Installation: to follow the guidelines detailed in "AS60034-17:2006 Cage induction motors when fed from converters - Application guide"
 - 2. Maximum safe operating speed to follow AS60034-1, Table 17

For variable torque loads (centrifugal pumps and fans) for speeds between 5-50 Hz derating is not normally required. Outside of this range please check with TECO for motor suitability.

Typical variable and constant torque load curves are shown below.

Speed vs. Torque Curves (assuming load torque @ 100% speed = motor full load torque)

Variable Speed Drives (VVVF) *continued*

Maximum Safe Operating Speeds (AS60034-1 Table 17)

Frame Number	2 Pole	4 Pole	6 Pole
≤ 112	5200	3600	2400
132 ~ 180	4500	2700	2400
200	4500	2300	1800
225 ~ 315	3600	2300	1800

Note: Motors are balanced to 60 Hz speed. If motor operation is above 60 Hz special balance may be required (please refer to TECO).

Motor Synchronous Speed vs. Frequency

Motor Synchronous Speed vs. Frequency

Cage Induction Motors when Fed from Variable Speed Drives

TECO motors follow the guidelines laid down in AS60034-17: "Cage Induction motors when fed from converters - Application guide".

Certain applications, installations and site condition may cause some damage to motors if they are not correctly installed. AS60034-17 has details on installation of Cage Motors and Variable Speed Drives.

Supply Systems ≤ 500 Volts

On TEFC motors frame size D280 and larger TECO can offer the option of a rotor groundary brush at the drive end in order to aid in reducing the effects of Electro Discharge Machining (EDM) on motor bearings, which can be prevalent in some cases.

On larger motors, frame size D315 and above, we recommend the additional option on an insulated bearing at the non drive end to eliminate shaft current and also assist in reduction of EDM through the motor bearings.

Both of these options can also be offered on smaller motors.

Supply systems in excess of 500 Volts and Open Drip motors frame size C280 and larger may require special consideration, please refer to TECO.

TECO Random wound stock motors are built in accordance to stress Category B per IEC60034-18-41.

The tested capability for PDIV (Partial Discharge Inception Voltage) for TECO stock motors up to 500Volts –

- Phase to Ground ≥ 1,843Volts@
rise time of ≥ 0.3us
- Phase to Phase ≥ 2,633Volts@
rise time of ≥ 0.3us

"Rotor Groundary Brush" fitted to D315 frame motor

Voltage and Frequency Variations during Operation - AS60034-1

For a.c. motors rated for use on a power supply of fixed frequency supplied from an a.c. generator (whether local or via a supply network), combinations of voltage variation and frequency variation are classified as being either Zone A or Zone B, in accordance with the figure right.

A machine shall be capable of performing its primary function continuously within zone A, but need not comply fully with its performance at rated voltage and frequency and may exhibit some deviations. Temperature rises may be higher than at rated voltage and frequency.

A machine shall be capable of performing its primary function within zone B, but may exhibit greater deviations from its performance at rated Voltage and frequency than in zone A. Temperature rises may be higher than at rated voltage and frequency and most likely will be higher than those in zone A.

Voltage and Frequency Limits for Motors

Voltage Variation, Effect on Performance

The characteristics of motors will of course vary with a corresponding variation in voltage of $\pm 10\%$ around the nominal value.

An approximation of these variations is given in the table below.

	Voltage Variation in %				
	$U_N - 10\%$	$U_N - 5\%$	U_N	$U_N + 5\%$	$U_N + 10\%$
Torque curve	0.81	0.9	1	1.1	1.21
Slip	1.23	1.11	1	0.91	0.83
Rated current	1.1	1.05	1	0.98	0.98
Rated efficiency	0.97	0.98	1	1	0.98
Rated power factor ($\cos\phi$)	1.03	1.02	1	0.97	0.94
Starting current	0.9	0.95	1	1.05	1.1
Nominal temperature rise	1.18	1.05	1	1.00	1.1
P (Watt) no-load	0.85	0.92	1	1.12	1.25
Q (reactive V A) no-load	0.81	0.9	1	1.1	1.21

Other Mains Supply

The TECO Australia 380~415 Volt 3-Phase 50 Hz stock motors up to frame size D315M are also suitable for re-nameplating to 440 Volt 50 Hz or 400~480 Volt 60 Hz without the need for derating. Performance details are [available on request](#).

Some world supply systems are given below. Site supply details should be checked to confirm.

World 3-Phase Voltage-Frequency

Country	Voltage	Frequency	Country	Voltage	Frequency	Country	Voltage	Frequency
Taiwan	380	60	Japan	200	50/60	* England	415*	50
Singapore	400	50	Philippines	460	60	* Germany	380*	50
Malaysia	415	50	India	400	50	Italy	380*	50
Indonesia	380	50	Korea	380	60	Spain	380*	50
Thailand	380	50	Vietnam	380	50	Netherlands	380*	50
China	380	50	USA	460	60	Australia	415	50
Hong Kong	346	50	Canada	460 or 565	60	South Africa	380	50
						Saudi Arabia	380	50

Note: * EU are harmonising voltage to 400 Volt 50 Hz
